

The University of Manchester — Computer Science

1. Rankings: <https://www.manchester.ac.uk/about/rankings/>

The University of Manchester's current rankings place us among the world's best universities.

World rankings

Using different methodologies, international rankings typically compare universities from across the globe for their research performance and academic reputation.

League table	World	Europe	UK
QS World University Ranking (2027)	40	11	7
QS World University Rankings: Europe (2026)		9	
Academic Ranking of World Universities (2026)	51	13	6
Times Higher Education (2026)	56		8
Times Higher Education Sustainability Impact Ratings (2026)	1	1	1
QS World University Sustainability Rankings	10	6	5

2. Fees & Cost

link: <https://www.manchester.ac.uk/study/undergraduate/courses/2026/00560/bsc-computer-science/>

UK £9,535 / Intl £30,000-£37,800

Tuition fees for home students will be £9,790 for the 2026/27 academic year (subject to Parliamentary approval). In England and Wales, tuition fees for home undergraduate students are subject to the [Government fee cap](#), which the Government has announced will be £9,790 for the 2026/27 academic year and £10,050 for the 2027/28 academic year (subject to Parliamentary approval).

The Government has also announced that the fee cap will then increase on an annual basis to reflect inflation (i.e. increasing costs), and the tuition fee home students pay in subsequent academic years will reflect any increases in the Government fee cap (which we will communicate to you as soon as we can in advance of the relevant academic year).

Tuition fees for international students will be £37,800 for the 2026/27 academic year. For subsequent academic years, the University reserves the right to increase the tuition fee by up to 7% each year including to reflect rising costs associated with delivering our education and wider student experience.

Queen Mary University of London — Computer Science

- **Entry link**

: <https://www.qmul.ac.uk/undergraduate/coursefinder/courses/2026/computer-science>

Computer Science Bsc(Hons):

A-Level	Grades AAA at A-Level. This must include one of A-Level Mathematics, Computer Science or Physics.
IB	International Baccalaureate Diploma with a minimum of 36 points overall, including three Higher Level subjects. This must include either Mathematics, Computer Science or Physics at Higher Level. We will consider either Mathematics: Applications and Interpretation or Mathematics: Analysis and approaches at Higher Level.
BTEC	See our detailed subject and grade requirements
Access HE	We consider applications from students with the Access to Higher Education Diploma in Computing. The minimum academic requirement is to achieve 60 credits overall at Level 3, of which 33 credits must be at Distinction and 12 credits at Merit or higher. Applications are considered on a case by case basis. Due to the high volume of applications, offers of study purely on the basis of meeting grade requirements. GCSE Mathematics is required in addition to the Access qualification.
GCSE	Minimum five GCSE passes including English at grade C or 4 and Maths at grade C or 4.
EPQ	Alternative offers may be made to applicants taking the Extended Project Qualification.

	For further information please visit: qmul.ac.uk/undergraduate/entry/epq
Contextualised admissions	Our standard contextual offer: ABB including one of Maths, Physics or Computer Science at A Level. Our enhanced contextual offer: BBB including one of Maths, Physics or Computer Science at A Level. More information on our contextual offer criteria can be found on our contextual offer page. Please note that General Studies and Critical Thinking are excluded from any A Level offer and cannot be considered.

Curriculum link:

<https://www.qmul.ac.uk/undergraduate/coursefinder/courses/2027/computer-science/>

Year 1

Semester 1

- ECS401U - Procedural Programming (15 credits)
- ECS404U - Computer Systems and Networks (15 credits)

- ECS407U - Logic and Discrete Structures (15 credits)
- ECS427U - Professional and Research Practice (15 credits)

Semester 2

- ECS414U - Object Oriented Programming (15 credits)
- ECS417U - Fundamentals of Web Technology (15 credits)
- ECS419U - Information Systems Analysis (15 credits)
- ECS421U - Automata and Formal Languages (15 credits)

Year 2

Semester 3

- ECS505U - Software Engineering (15 credits)
- ECS509U - Probability and Matrices (15 credits)
- ECS519U - Database Systems (15 credits)
- ECS529U - Algorithms and Data Structures (15 credits)

Semester 4

- ECS506U - Software Engineering Project (15 credits)
- ECS518U - Operating Systems (15 credits)
- ECS522U - Graphical User Interfaces (15 credits)
- ECS524U - Internet Protocols and Applications (15 credits)

Optional summer internship

ECS620U - Optional credit-bearing summer internship (15 credits), offered between second and final year.

Year 3

Semester 5

- ECS635U - Project (30 credits)

Choose three from:

- ECS607U - Data Mining (15 credits)

- ECS610U - Computer Graphics (15 credits)
- ECS638U - Design for Computer Human Interaction (15 credits)
- ECS639U - Web Programming (15 credits)
- ECS640U - Big Data Processing (15 credits)
- ECS642U - Embedded Systems (15 credits)
- ECS651U - Computability, Complexity and Algorithms 15 credits)
- ECS657U - Multi-platform Games Development (15 credits)
- ECS658U - Further Object Oriented Programming (15 credits)
- ECS671U - Semi-Structured Data Engineering (15 credits)

Semester 6

- ECS635U - Project (continued) (30 credits)

Choose three from:

- ECS605U - Image Processing (15 credits)
- ECS622U - Product Development (15 credits)
- ECS637U - Digital Media and Social Networks (15 credits)
- ECS647U - Bayesian Decision and Risk Analysis (15 credits)
- ECS652U - Compilers (15 credits) (pre requisite ECS421U)
- ECS655U - Security Engineering (15 credits)
- ECS656U - Distributed Systems (15 credits)
- ECS659U - Neural Networks and Deep Learning (15 credits)
- ECS661U - User Experience Design (15 credits)
- **Graduate & Salary link:** <https://discoveruni.gov.uk/course-details/10007775/UBSF-QMCOMF1-USCOYZ/Full-time/>

Median earnings for all full-time Computing courses

The data displayed is from students on courses in Computing.

For graduates from Queen Mary University of London

After 15 months

£33,500

Typical range: £30,000 - £37,500

Data from

65 people

(70% of those asked).

Data for students graduating 2022-23

- **Teaching & NSS**

link: <https://www.qmul.ac.uk/undergraduate/coursefinder/courses/2026/computer-science>

- **Teaching**

- Teaching and learning
- You'll spend 15 to 20 hours per week in lectures, laboratory sessions and tutorials. You will also be expected to complete additional hours of independent study. You'll meet with your personal advisor regularly to ensure that you are settling in and progressing well.
- Assessment
- Assessment typically includes a combination of coursework (presentations, assignments, essay report writing, in-class tests, research and project work) and/or examinations in May or June.
- Individual and group projects are assessed through a written report, practical demonstration and oral examination.
- Resources and facilities
- As a student, your home will be the Mile End campus. You'll spend lots of time in our newly refurbished Informatics Teaching Lab (ITL), which is exclusively for Electronic Engineering and Computer Science students. This lab has recently undergone a £20 million refurbishment, which will be completed in January 2026. Students joining in September will be among the first to use this new facility.
- The labs are open seven days a week, generally between 8am and midnight. Students can also gain remote access to the School's computing facilities 24-hours a day.
- We also have a number of students employed as 'module demonstrators', who are available in labs to help first and second-year students to navigate software and programming tools.

GRADUATE OUTCOMES AND SALARY LINK: <https://discoveruni.gov.uk/course-details/10003957/4500006603/Full-time/>

The [Graduate Outcomes \(GO\) survey](#) collects information from students 15 months after they finish their course. It asks them what they are currently doing, how much they are earning, and their perceptions of work following their graduation from their course. This survey is undertaken by the Higher Education Statistics Agency (HESA).

Our [earnings and employment' page](#) provides more information on how to use the data provided on Discover Uni.

The data we show on Discover Uni is from the most recent Graduate Outcomes survey, which covers graduates who finished their higher education courses between August 2022 and July 2023. This is sometimes combined with survey data from the previous Graduate Outcomes survey (of 2021-22 graduates). We combine two years of survey data when there are not enough students in the most recent year of data for us to publish it. It will be noted on each course page whether the data is using one year or two years of survey data.

We use Graduate Outcomes data to compile the statistics in several sections on our course pages. Before we publish any figures based on the Graduate Outcomes survey, we first ensure that there are at least 10 people who responded for the course or subject being reported and that they make up at least half (50%) of the people who could have responded.

Graduate outcomes (GO) results

The Graduate Outcomes (GO) data in the 2025-26 dataset was created using data from the survey of students who graduated in 2021-22 and 2022-23. There were 358,045 graduates who responded to the latest survey.

Analysis of the data by HESA shows that:

- 88% of graduates were in some form of work or further study.
- The proportion of graduates engaged in full-time further study has decreased slightly to 5%.
- 85% of UK graduates agreed that their current activity is meaningful.
- 77% of UK graduates agreed that their current activity fits with their future plans which is a decrease from the previous year (80%).
- Unemployment accounted for 6% of responses among 2022-23 graduates, an increase of 1 percentage point from 2021/22.
- Among 2022/23 graduates, 82% of respondents were in employment or unpaid work. The majority of these graduates were engaged in full-time employment (59%), with 11% of graduates being engaged in part-time employment and 10% in employment and further study.

In the 'Earnings after the course' section

The salaries shown in bold in the 'Earnings after the course' section are median salaries. The median salary is found by listing all salaries for a group of people from lowest to highest, then selecting the middle value. The median salary could be described therefore as the "typical" salary for a group of people.

In this section, Graduate Outcomes data is used to present the median earnings of graduates 15 months after they finish their course.

You can also use the drop-down menu to view Graduate Outcomes earnings data at UK level or national level (England, Northern Ireland, Scotland or Wales). This data has been published to provide context. This means that you can see the median earnings for graduates from all courses in the subject that live or work in the selected location. Because the median earnings for a region may be higher or lower than the median earnings at national or UK level, we also include the percentage of graduates from the institution that are based in the chosen region.

This gives an indication of whether the regional figure you have chosen is a good benchmark for the institution.

Please note that we do not include earnings data for those that are self-employed.

You will also find earnings data in this section from the Longitudinal Educational Outcomes (LEO) dataset. We have used LEO data to present the median earnings for earlier cohorts of graduates in the same subject three and five years after their graduation. Please see the LEO section below for more details. All the earnings information in this section has been treated and summarised in similar ways to make comparisons as meaningful as possible.

In the 'Employment 15 months after the course' section

Graduate Outcomes data is used to show the percentages of graduates who are working, studying, working and studying, and unemployed, 15 months after completing their course.

You will also see the type of occupations that these graduates are working in, 15 months after graduating from the course and whether these are considered high-skilled (meaning they are considered to be professional or managerial occupations by the Office for National Statistics). Occupations have been classified using the Standard Occupational Classification (SOC) 2020 system.

In the 'Graduate Perceptions' section

Here you will find the percentages of graduates who, at 15 months after graduation, agreed that what they learned on their course was useful for what they were currently doing, that they found their work meaningful, and that their work fits with their future plans.

What you need to know about the data

- Here you will find the percentages of graduates who, at 15 months after graduation, agreed that what they learned on their course was useful for what they were currently doing, that they found their work meaningful, and that their work fits with their future plans.
- [Read more about Graduate Perceptions](#)

70% of graduates find their current work meaningful

- Source: [Graduate Outcomes survey](#)
- Data for students graduating 2022-23
- Data from

35 students (55% of those who were asked)

The data displayed is from students on this and other courses in Computer science.

There was not enough data to publish information specifically for this course. This may be because the course size is too small or not enough students responded to the survey. This does not reflect on the quality of the course.

Perception of work after graduating

Source: [Graduate Outcomes survey](#)

Data for students graduating 2022-23

Data from

TEACHING QUALITY AND NSS:

<https://www.ljmu.ac.uk/study/courses/undergraduates/2026/45579-computer-science-bsc-hons>

Excellent facilities and learning resources

We adopt an active blended learning approach, meaning you will experience a combination of face-to-face and online learning during your time at LJMU. This enables you to experience a rich and diverse learning experience and engage fully with your studies. Our approach ensures that you can easily access support from your personal tutor, either by meeting them on-campus or via a video call to suit your needs.

You will begin the course with a three-day induction and then spend approximately 15 hours per week in the classroom. Independent study is a fundamental element of the course and accounts for about 70% or 35 hours of your weekly study time.

Teaching is mostly via lectures with more informal lab sessions, online activities and small-group tutorials to reinforce ideas discussed in the lectures and to give you a chance to develop ideas with staff and other students. You will be based in LJMU's Byrom Street campus, which is engineered to guarantee your success thanks to the investment of 6million in state-of-the-art laboratories and teaching facilities.

Our computer laboratories provide access to over 400 specialist high-performance computers, in addition to the campus computing cluster. Teaching rooms are also designed to enable the multimedia delivery of teaching materials and demonstrations.

Work-related Learning

Our teaching is supported by high quality research and collaboration with 450 local and national companies such as Merseyside Police, Cheshire Police, Xyone Security, Fujitsu, Corus, Unilever, Sony Computer Entertainment Europe, IBM, Eutechnyx, Jagex, Spiral House, Heinz, Liverpool Direct, Pilkington, MBNA Bank, HM Treasury, Lloyds TSB, Thames Water Authority, AstraZeneca, Littlewoods, Vauxhall Motors, GlaxoSmithKline to name but a few. This means that our computing courses are designed and developed to meet the needs of employers today, as well as creating excellent work placements for students.

Dedicated personal tutor, plus study skills support

From the moment you enrol at LJMU, you will be allocated a personal tutor who will work with you on setting targets for yourself as part of your personal development plan, and provide one-to-one support on course-related or other matters. Should you choose to undertake a year's work placement, this support will continue as a supervisor will stay in close contact and visit you two or three times at your workplace.

Your lecturers

We are proud of our academic staff's high quality teaching standards and approachability. If you decide to study here, you will be joining a relaxed and friendly academic Department where

staff are committed to helping you achieve your potential academically and personally and to ensuring that all courses are continually developed to meet the needs of employers.

Assessment varies depending on the modules you choose, but will usually include a combination of exams and coursework.

You will be assessed by a combination of coursework and exams and a personal independent project. Your tutors will give prompt and constructive feedback via Canvas (our virtual learning environment), face-to-face or as written comments.

Career prospects

Thanks to LJMU's industry-recognised teaching and research excellence in Computer Science, our students are highly sought after by employers both in the UK and overseas and many secure employment before they graduate.

This BSc degree leads to a range of careers in the computing or Information Technology industry, such as:

- Applications Analyst
- Systems Manager
- Software Engineer
- Computer Networks
- Analyst Web Developer or Designer

The transferable skills developed on this course are also highly valued in many other fields of employment.

CareerSmart programme

All students in their first year of study will have an opportunity to engage with the CareerSmart programme as an integral part of a core module of study. Once you have completed this, a wide range of other career-related provision and services will be available to support your development throughout your studies. The new CareerSmart e-learning tool will introduce you to the steps involved in making informed choices about your career. It will enable you to consider your strengths and development areas, your career motivators, the options available to you and the necessary steps to take to achieve your career goals.

What you will study on this degree

Further guidance on modules

Modules are designated core or optional in accordance with professional body requirements, as applicable, and LJMU's Academic Framework Regulations. Whilst you are required to study core modules, optional modules provide you with an element of choice. Their availability may vary and will be subject to meeting minimum student numbers.

Where changes to modules are necessary these will be communicated as appropriate.

Core modules for Year 1

Intro to Programming

20 credits

Professional Practice

10 credits

Data Modelling

10 credits

Foundations of Computer Science

20 credits

Computer Science Workshop

20 credits

Web Development I

20 credits

Computer Systems Architecture

20 credits

Core modules for Year 2

Core modules

Group Project

20 credits

Database Systems

20 credits

Operating Systems

20 credits

Algorithm Design

20 credits

Automata, Languages and Computation

20 credits

Optional modules

Sandwich Year - Computer Science

120 credits

Study Year Abroad - Computer Science

120 credits

Object Oriented Systems

20 credits

Secure Software Development

20 credits

Web Development II

20 credits

Core modules for Year 3

Core modules

Computer Graphics and Visualisation

20 credits

Contemporary Concepts in Computer Science

20 credits

Project

40 credits

Optional modules

Artificial Intelligence for Software Engineers

20 credits

Network Defence

20 credits

Applied Cryptography

20 credits

Embedded Systems

20 credits

Professional accreditation link:

<https://discoveruni.gov.uk/course-details/10003957/4500006603/Full-time/>

Fully accredited by BCS

What you need to know about professional accreditation

A professionally accredited course is one which has been approved or endorsed by one or more professional bodies. This is because the learning and achievement of graduates meets the professional benchmarks and standards set by the accrediting body.

Accredited by BCS, the Chartered Institute for IT for the purposes of fully meeting the academic requirement for registration as a Chartered IT Professional. [Find out more](#)

Accredited by BCS, the Chartered Institute for IT on behalf of the Engineering Council for the purposes of partially meeting the academic requirement for registration as a Chartered Engineer. [Find out more](#)

Lancaster University

Entry link: <https://www.lancaster.ac.uk/study/undergraduate/courses/computer-science-bsc-hons-g400/2026/#course-entry>

These are the typical grades that you will need to study this course. This section will tell you whether you need qualifications in specific subjects, what our English language requirements

are, and if there are any extra requirements such as attending an interview or submitting a portfolio.

A levels

Access to HE Diploma

36 Level 3 credits at Distinction plus 9 Level 3 credits at Merit

Advanced Skills Baccalaureate Wales

We accept the Advanced Skills Baccalaureate Wales in place of one A level, or equivalent qualification, as long as any subject requirements are met.

BTEC Extended Diploma

DDD

BTEC in combination with A levels

A level at grade B plus BTEC(s) at DD, or A levels at grade AB plus BTEC at D. Though not an essential subject entry requirement, applicants with A level Computing, Computer Science or Mathematics will be considered for a lower offer.

International Baccalaureate

35 points overall with 16 points from the best 3 HL subjects. Though not an essential subject entry requirement, applicants with HL Mathematics or Computer Science will be considered for a lower offer.

Scottish Highers and Advanced Highers

We are happy to admit applicants on the basis of five Highers, but where we require a specific subject at A level, we will typically require an Advanced Higher in that subject. If you do not meet the grade requirement through Highers alone, we will consider a combination of Highers and Advanced Highers in separate subjects. Please [contact the Admissions team](#) for more information.

T levels

Distinction overall

GCSE requirements

Mathematics grade 6/B, English Language grade 4/C

English language requirements

We require an IELTS score of 6.0 overall with at least 5.5 in each component for this programme. [English language qualifications for undergraduate study](#).

Manchester Metropolitan
